The Situation. As a science major, you should have a portfolio. This work is a collection of examples of personal achievement and development and also contains resources that can be used in laboratories or other forms of scientific employment. Electronic portfolios are becoming increasingly popular as a means to preserve and present portfolio information.

The Assignment. Create a Home Page that can be put on the Internet. The Home Page should have links that point to components of your electronic portfolio. Components that are required are listed below.

Home Page

- Personal Information (enough to introduce yourself to a potential employer but not enough to cause a problem with identity theft)
- A directory or list of pages that you will link to

Linked Pages

- A list of the biology and chemistry courses that you are required to take and a brief description of each one. This page must be done using a definition list.
- A page indicating your primary and secondary interests in biology and sciences in general. You may want to use photographs and diagrams to help with this page.
- A page indicating the ways in which you would incorporate technology (computers and otherwise) into your work as a biologist.
- A list of professional organizations and websites that could be helpful to biology majors. A beginning point would be the electronic version of this list which was done as part of Assignment #2.
- A page with links to various sources of information that biology majors can use in major classes such as ecology, genetics and zoology.
- A page discussing how Spreadsheets can be used in class and laboratory in science.

Format

All Web Pages in your Electronic Portfolio must be correctly written using good HTML and css formats. You should use tables and lists wherever possible to make each page easy to read and understand. There should be a common style of presentation throughout the portfolio. This
means that all page headings should be the same, the same fonts and styles should be used on each page, and other features should be uniform throughout the project.

Consult the links for Electronic Portfolios included as part of PowerPoint and Electronic Portfolios on my ID 2950 Web Site.
